

## HIOSH FY 2004 Inspection Scheduling Program

Focusing on the most dangerous industries in Hawaii, as shown by the latest data from the Bureau of Labor Statistics injury and illness rates and the Census of Fatal Occupational Injuries, HIOSH has released a list of these industries (see tables below) in its inspection scheduling program. Some of the industries are the same as in fiscal year 2003; however, some additional areas of emphasis have been added as a result of the data, such as agricultural services, auto repair and services, residential construction, masonry, local and suburban passenger transportation (e.g. airport transportation services, sightseeing buses, etc.).

<b>CONSTRUCTION</b>	
<b>SIC</b>	<b>AREA OF EMPHASIS</b>
152	Residential Building
154	Non-Residential Building
16	Heavy, except Building
174	Masonry, Stonework, Tile Setting & Plastering
179	Miscellaneous Specialty (e.g. structural steel erection; glass & glazing, excavation, demolition)

<b>GENERAL INDUSTRY (includes public sector)</b>	
<b>SIC</b>	<b>AREA OF EMPHASIS</b>
07	Agricultural Services
	Manufacturing - Durable Goods
20	Manufacturing - Food
411	Transportation - Local/Suburban Passenger Transportation
7011	Services - Hotels & Motels
75	Services - Auto Repair, Services & Parking
806	Services - Hospitals
	Local Government

**NOTE:** You can find what industries are included in specific SIC (Standard Industrial Classification) codes by going to the OSHA home page ([www.osha.gov](http://www.osha.gov)). Find "SIC/NAICS Search" under Statistics.

Starting October 1, 2003, all employers with eleven or more employees in the high hazard industries will be randomly selected for inspection, therefore, HIOSH encourages employers within these industries to contact its Consultation and Training Branch at 586-9100 to arrange for a free, confidential on-site consultation with no citations and penalties. The consultants can:

- ☐ Conduct a safety and health survey of your workplace to identify hazards
- ☐ Recommend possible solutions for your safety and health problems
- ☐ Assist in the assessment and development of your safety and health program
- ☐ Offer technical advice about specific safety and health concerns

In addition to using the basic inspection scheduling list, HIOSH will continue to conduct unprogrammed inspections that result from accidents, complaints, follow-ups, imminent danger and referrals.
